

THREE LADDER SIDE-MOUNTED LADDER RACK SPECIAL FEATURES

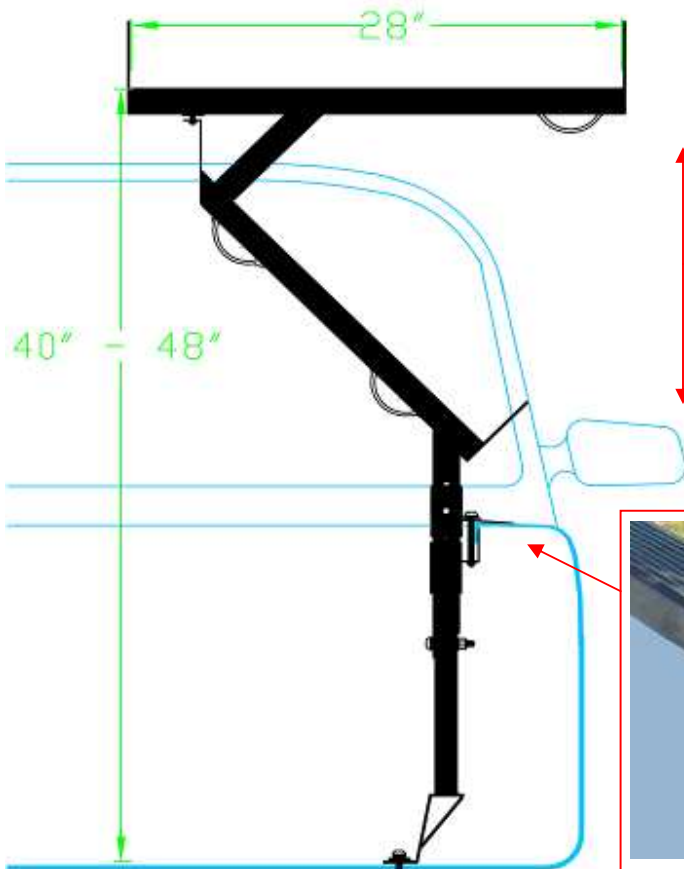

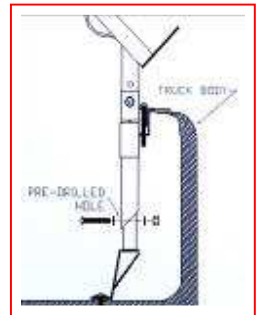

This is the World's only side-mounted rack that carries three unstacked ladders.

Three well-placed tie-down loops are located on the crossbars for use with bungee cords or ratchet straps. All three ladders can easily be secured.

Your ladders are always in easy reach because this rack adjusts to fit truck beds of any depth and cabs of any height.

Only one small hole must be drilled into the floor of the truck bed to secure the bottom of the rack. A threaded pin keeps the bottom from moving.

The powerful integrated clamping system locks the ladder rack to the bedrail but can be loosened and the entire rack removed in just a few minutes.

This sturdy rack is made of steel with an exterior that is electro-chemically passivated and then powder coated. All threaded hardware is stainless steel. Working load is up to 250 lbs.
